

ISSS 2015 Berlin – Workshop Proposal

Title: The Apithology of Humanity Psychology: An Introduction

Date: 2 August 2015

Time: 12.30pm – 4.30pm

Facilitator: Dr. Will Varey

Apithology is a systems discipline that investigates the generative dynamics of living systems. Its specific focus is the causative dynamics of generative health and wellbeing. It provides a counterpart discipline to pathology, which examines the causes of dissipative dysfunction and disease. Apithology as a theory of practice is generated at the humanity-level of inquiry. It is applied in practice at individual-scales through practical applications.

In this Workshop participants will be introduced to the principles of apithology. Participants will be provided with examples of applications and will generate their own. Apithology as a discipline presently has over 120 modalities. This workshop will cover five preliminary inquiry practices: Adequacies, Concordances, Dimensions, Actuations, and Healths. This workshop will focus on their application to the wellbeing of humanity as a generative system, in line with the ISSS 2015 Conference theme.

This will be the first time this Workshop has been made available to practitioners in Europe. Systems practitioners, researchers and students with a humanitarian focus and a specific interest in generative systems are encouraged to attend.
