

SYSTEMIC DESIGN WORKSHOP

Peter Jones

An interactive workshop on systemic design for general and open attendance. Following an introduction to principles and processes, small groups will form to construct design models in application areas of interest to participants (e.g. urban ecology, healthcare systems, political governance, sustainable business). The workshop is largely based on the 10 Systemic Design principles (Jones, 2014) and Methods (<http://systemic-design.net/rsd3-proceedings/theories-methods/>.)
